

QUALITY POLICY

KWD is committed to the design, fabrication and on-time delivery of high quality aerospace equipment. Our management team recognizes the need for and fully supports the implementation and maintenance of the Quality Management System in conformance with ISO Current Standards and has determined that the following are matters of policy:

- Every effort is made to ensure that each product meets all customer specifications, is delivered on time or early, and that post-delivery service exceeds the customer's expectations.
- Continual improvement of the Quality Management System, including periodic internal audits, a vigorous inspection program, and process monitoring.
- All employees are given opportunities for professional advancement through experience, education and training and are encouraged to reduce rework, material waste and inefficiency.
- All employees are responsible for ensuring that they do not pass non-conforming materials or erroneous information on to the next operation, employee or user.
